eu.bac – Now also the Single Voice of the European Residential Controls Manufacturers

Brussels, 28.06.2011 – The major European manufacturers of thermostatic valves and other residential controls have formed their European association as part of eu.bac, the European Building Automation and Controls Association. By bringing together the vast majority of manufacturers in the building automation and controls sector both for residential and non-residential buildings the industry now has one single voice in Brussels.

Current members of the eu.bac Residential Controls Group are Broen, Comap, Danfoss, Delta Dore, ESBE, Hager, Herz, Honeywell, Invensys, Oventrop, Siemens, Sonder, TA Heimeier and Theben, who, through this new, strong representation in Brussels will be able to receive and provide first hand information to policy-makers and other stakeholders more efficiently. With this step, eu.bac has now truly become the leading stakeholder in all questions regarding controls and building automation as well as energy services. The latter is covered by the European Association of Energy Service Companies (eu.ESCO), under the umbrella of eu.bac.

The revised statutes of eu.bac now reflect the targets of the 3 working groups for building automation, residential controls and Energy Services. The main activities of eu.bac in the years to come will cover advocacy, standardization and certification of products and systems as well as member services and promotion of the industry as the major enabler of Energy Efficiency and comfort in homes and buildings.

About eu.bac

In order to meet to the European energy efficiency guidelines, EPBD, as well as customers' requirements for the energy efficiency of their buildings, leading international companies created the European Building Automation and Controls Association (eu.bac). The goal of the association is the standardization, testing and certifying of products, which are key to the energy-efficient control of building services installations.
