

PT1000

Ohm scale according to the temperature at which the probe is at to check operation

°C	0	+10	+20	+30	+40	+60	+80	+100	+120	+160
Ω	1000	1039	1078	1117	1155	1232	1309	1385	1461	1610

- Reading range: -50°C a +200°C

- Reading range: -50°C a +120°C

PTC2000

Ohm scale according to the temperature at which the probe is at to check operation

°C	-20	-10	0	+10	+20	+30	+40	+50	+60	+70	+80	+90	+100	+110	+120
Ω	1367	1495	1630	1772	1922	2080	2245	2417	2597	2785	2979	3182	3392	3607	3817

ECO - PVC Cable 1,5m. Reading range -50 a +120°C

PTC2000 - Silicone Cable 1,5m / 3m. Reading range -40 a +140°C

PT100

- 2-wire Immersion Probe, Scale -50 a +200°C

S.R. - Double insulation, 3m. Range -30 a +80°C

NTC 10K

Installation of Temperature Probes in Solar Collectors

The probe cables can never go through the same channel as the electrical cables, as they create interference in the reading. For a correct reading of the temperature in the solar panels, it is advisable to install the probe inside a sheath full of Thermal Paste (heat-conductive silicone), which transmits the temperature of the panel to the sensor of the probe with greater reliability and fix it by means of the grub screw (just without cutting the cables with the tip of the screw).

Thermal Paste

- Silicone for filling and improving thermal conductivity inside sheaths or in contact applications
- Can be used in thermostats with sheath or clamping flange as well as with electronic probes
- Evaporation (200°C/24h): 0.7%
- Temperature range: -57°C to 204°C

with a plug!!

TARRO 500 grs.	5.614	Jar without applicator
JERINGA 10 grs.	5.652	Syringe with applicator plug

Sheath

- Thread ½" or M12
- Øext. Sheath = 10 mm Øint. = 7 mm

VAINA 20	24.046	Stainless steel length 20 mm. M12 thread
VAINA 50	24.027	Stainless steel length 50 mm. Thread ½"
VAINA 100	24.025	Stainless steel length 100 mm. Thread ½"
VAINA 200	24.026	Stainless steel length 200 mm. Thread ½"
VAINA 50L	24.029	Nickel-plated brass. Length 50 mm. Thread
